Faculty of Electrical Engineering, Computer Science and Information Technology Osijek

Advanced Web Programming

Task 1.

1. Make a new **Laravel** installation that will be in the **projects** directory (https://laravel.com/docs/5.8/installation). The application should have possibility to register new users (users register themselves). Users must be able to log in and log out.
2. A new migration (https://laravel.com/docs/5.8/migrations) needs to be made for the projects table in which users will keep a record of theirs projects. The project should have the attributes of the project name, project description, project price, done jobs, start date and end date.
3. Multiple project team members can be added to each project (members thus they are obtained from a list of users who have registered with the application). The project manager will be the person who opened the project.
4. On his profile, each user sees the projects he has opened (the projects he is in charge of), and projects to which he was added as a member of the project team.
5. The project manager can modify all data on the project and the project team members only can edit the attribute jobs completed.

Task 2.

Laravel application from Task 1. should be made as multi language (English and Polish). Laravel has multi language possibility:
